

AIVOI.AI Manual Testing Report & QMS Insights

AIVOI.AI - Round 1 Assessment

Prepared By:

K Shridharan

Email : kshridharan6@gmail.com

Testing Objective :

Objective :-

To evaluate the AIVOA.AI website through manual exploratory testing by examining its functionality, navigation, form validations, user interface, and overall user experience while identifying potential issues and areas for improvement.

Testing Scope :-

- > Website Navigation
- > Form Validation
- > Functional Testing
- > UI Consistency
- > User Experience
- > Exploratory Testing

Website Exploration

Sections Explored :

- Homepage
- Platform
- Modules
- Pricing
- Contact
- Book Demo

Testing Approach :

- Explored each section as a first-time user.
- Verified navigation and interactions.
- Performed positive and negative form validation.
- Reviewed usability and visual consistency

Key Findings

Functional Issues

● Phone Number Validation

Accepted alphabetic characters instead of numeric input.

● Name Validation

Accepted numeric values also without validation.

● Company Name Validation

Accepted numeric values without validating company names.

The screenshot shows a demo booking form for QMS.AIVOA.AI. On the left, a sidebar lists benefits: 'We run your real deviation or OOS scenario live — not a canned demo', 'No slides. No generic pitch. Just results in real time', and 'Get a site-specific ROI estimate for your plant'. It also shows '3 of 5 demo slots booked this week'. The main form fields include: 'WORK EMAIL' (abc@gmail.com), 'YOUR NAME' (12546), 'WHATSAPP / PHONE' (abj abdul kalam), 'COMPANY NAME' (86356), and 'BIGGEST QA HEADACHE RIGHT NOW' (Select your biggest pain point). There are checkboxes for 'INDUSTRY TYPE' (Bulk API, Formulation, CDMO, Other). A large blue button says 'Book My Free 30-Min Demo'. Below the button, it states 'No credit card. No commitment. We'll confirm your scenario before the call.'

UI/UX Observations

Observation 1 : Module Section Navigation

The page captures the user's scroll and requires navigating through every module before allowing access to the next section. This may slow navigation for users who wish to browse the website quickly.

Observation 2 : Homepage Metric

The metric showing “0 Batches Released with Open Quality Events” may be confusing for visitors unfamiliar with pharmaceutical terminology. A clearer explanation or tooltip could improve understanding.

Recommendations

- > Strengthen validation for phone, name, and company fields.
- > Provide field-specific validation messages instead of generic error messages.
- > Allow users to bypass the module showcase while scrolling.
- > Improve the explanation of technical metrics for first-time visitors.
- > Continue maintaining the website's clean and professional interface.

Overall Assessment :

Strengths :

- * Modern and professional user interface.
- * Clean navigation and branding.
- * Well-structured content.
- * Smooth overall browsing experience.

Areas for Improvements :

- * Input validation.
- * User guidance.
- * Navigation flexibility.
- * Improved feedback messages.

Conclusion : The website provides a strong user experience with only a few functional and usability improvements recommended to further enhance accessibility and data quality.

Strengths

- ✓ Clean and modern UI
- ✓ Good navigation
- ✓ Professional design
- ✓ Consistent branding
- ✓ Smooth experience

Improvements

- Input validation
- Module navigation
- Error feedback
- User guidance

Overall

The website is stable, well-designed and provides a great user experience with only minor improvements recommended.

The End-to-End QMS Workflow

01

Raw Material

Sourced ingredients & checks

03

Quality Inspection

Purity & compliance testing

05

Deviation

Process anomalies identified

07

FDF Formulation

Mixing active ingredients

09

Final Quality Check

End-of-line verification

11

Distribution

Logistics & supply chain

02

API Manufacturing

Active chemical synthesis

04

FDF Production

Final dosage preparation

06

CAPA & Re-testing

Corrective actions applied

08

Packaging

Final product containment

10

Batch Release

Authorized release sign-off

12

Recall

Market withdrawal protocol

Core QMS Modules

Events

Deviation
Ensures systematic identification and logging of unexpected GMP events across manufacturing operations.

Mitigation

CAPA
Establishes rigorous corrective and preventive actions to tackle root causes and stop recurring events.

Evaluations

Quality Checks
Executes standardized testing at scheduled key intervals across product lines to verify safety.

Procedures

Change Control
Governs deliberate alterations in production machinery, raw materials, processes or testing criteria.

Inspections

Audits
Schedules periodic independent regulatory evaluations verifying robust SOP adherence.

Security

Recall
Prepares rapid containment pathways to withdraw non-compliant products efficiently from open markets.

Assessment Research Roadmap

The structural approach followed to analyze AIVOA.AI platform capabilities and build the assessment report:

AI-Driven QMS Automation

Transitioning from slow legacy tracking to intelligent platform automation:

Executive Key Takeaways

Medicine Quality
Consistent QMS minimizes batches released with open quality exceptions.

Patient Safety
Quick issue identification directly shields end-consumer patient pools.

Compliance
Rigorous CAPA ensures total adherence to 21 CFR regulations.

AI Automation
Transitioning to AI w drives operational QA efficiency.

Thank You!

I appreciate your time and review of this Round 1 Assessment.
